

**Practical - 10**  
**Ajax Extensions Control**

1. Create a webpage which changes font and background colour of label at the interval of 3 seconds without refreshing whole web page.
2. Use the same web page created in program 1 to display the cricket score from the table cricketscore(id, name, score). Refresh the website automatically after every 30 seconds.
3. Create a web page to display the news from the news table(id, news\_details). Use AJAX. Demonstrate partial and full post back to update the news.
